ABSTRACT OF THE DISCLOSURE

To provide a recording-medium cartridge and a recording-and-reproducing device in which a write-once area and a re-writable area can exist together. By controlling recording-and-reproducing device 11 based on the information showing the re-writable area and the write-once area stored in management information of cartridge memory 9 and by recording on the magnetic tape MT, co-existence of the re-writable area and the write-once area on the magnetic tape MT is achieved.
